DETAILED ACTION

Response to Amendment

1. This action is responsive to an amendment filed 06/28/04. Claims 2-5, 7-10 and 12-16 are pending. Claim 17 has been cancelled.

Response to Arguments

2. Applicant's arguments mailed on 06/28/04 have been fully considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 2-5, 7-10 and 12-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Miner et al. (U.S. Patent No. 5,652,789).

Regarding claims 4, 14 and 15, Miner teaches receiving, via a data network, reminder data (i.e., event data) associated with the user, the reminder data comprising information for connecting the call to the one or more parties and a time period for initiating the call (fig.29, 30; col.40, lines 15-43).

Miner further teaches storing the reminder data in a database (col.40, lines 6-15, 44-64).

Miner further teaches determining that a current time is within the time period for connecting the call (col.40, line 63- col.41, line 1). (Note; when delivery time comes in,

Art Unit: 2645

the Cron agent sends the reminder parcel to the user and the reminder message is for calling up a contact, therefore, it is clear that the Cron agent determines a current time which is within the time period for connecting the call)

Miner further teaches notifying the user that the call is about to take place (fig.31; col.41, lines 6-22).

Miner further teaches receiving "call Them" command (i.e., confirmation) from the user to initiate the call to the one or more parties on behalf of the user (fig.31; col.41, lines 56-63).

Miner further teaches establishing the call between the user and the one or more parties via the telephone network based on the reminder data (fig. 5, 31; col.11, lines 22-25, col.41, lines 56-63).

Regarding claims 2 and 12, Miner teaches updating the database to reflect changes in the reminder data (fig.32; col.42, lines 7-32).

Regarding claims 3, 8, 9 and 13, Miner teaches determining based on the reminder data a telephone number associated with the user and a telephone number associated with the one or more parties (fig.29, 30; col.40, lines 15-34, 55-64).

Miner further teaches connecting the call between the user and the one or more parties via the telephone network based on the telephone numbers (fig.31; col.41, lines 56-63).

Regarding claims 5 and 16, Miner teaches establishing at least one reminder data (i.e., event record) corresponding to the call, the reminder data comprising user information and at least one telephone identifier (fig.29, 30; col.40, lines 15-34, 55-64).

Art Unit: 2645

Miner further teaches associating the reminder data with an event time (col.40, lines 15-34).

Miner further teaches requesting authorization from the user to initiate the call, based on a current time and the event time (col.41, lines 53-63). (Note; since the user elects not to reschedule the reminder, the user authorizes the electronic assistant to place the call)

Miner further teaches initiating the call to the at least one party on behalf of the user, based on an affirmative response to the authorization request from the user (col.41, lines 53-63).

Regarding claim 10 is rejected for the same reasons as discussed above with respect to claim 4. Furthermore, Miner teaches an electronic assistant (i.e., transmitter) connecting the user (i.e., caller) via the telephone network to the one or more parties based on the reminder data (fig. 5, 31; col. 11, lines 22-25, col. 41, lines 53-63).

Regarding claim 7, Miner teaches the electronic assistant system (i.e., calendar system) to updating the reminder data (fig.32; col.42, lines 7-32).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vance et al. (U.S. Patent No. 6,411,605) teach Scheduler for telecommunications bridge, D'Angelo (U.S. Patent No. 6,717,938) teach System controlling use of a communication channel, Sammon et al. (U.S. Patent No. 6,563,914) teach Personal web-based teleconferencing method and system and Johnson (U.S. Patent No. 6,735,292) teach Method and system for priority call processing.

Application/Control Number: 10/084,121
